

RICHARD UZOR

Senior Mobile Engineer | Android · iOS · Flutter · React Native · .NET MAUI

Abuja, Nigeria · Open to remote (worldwide) & relocation · hellorichard.uzor@gmail.com · +234 813 266 5650
github.com/EQua-Dev · linkedin.com/in/richard-uzor · [Portfolio](#)

PROFILE

Mobile engineer with 5+ years building and shipping production applications across Android (Kotlin), iOS (Swift), Flutter, React Native and .NET MAUI. Twelve-plus apps live on Google Play and the App Store spanning fintech, health, e-commerce and marketplace products. Equally comfortable owning a consumer app end-to-end and building the SDKs, native modules and binding layers that other engineering teams integrate — currently shipping a real-time computer-vision SDK for a UK medical-devices manufacturer. Remote-native: has delivered for teams in the UK, US and Nigeria across time zones.

TECHNICAL SKILLS

Native Mobile Kotlin, Java, Swift, SwiftUI, Jetpack Compose, Android SDK, Xcode, MapKit, CameraX, Media3, MediaCodec/MediaMuxer, Foreground Services

Cross-Platform Flutter (Dart), React Native (TypeScript), .NET MAUI (C#), Xamarin binding libraries

SDK & Native Modules Cross-platform SDK design, C# binding libraries, native AAR wrapping, iOS framework packaging, React Native TurboModules, Flutter plugins, versioning & developer documentation

Computer Vision / ML Google MediaPipe, Google ML Kit, real-time pose detection, on-device video processing, face redaction

Architecture & State MVVM, Clean Architecture, BLoC / Cubit, Coroutines & Flow, dependency injection, modularisation, server-driven UI

Integrations RESTful APIs, GraphQL, WebSockets & Socket.io, Firebase, push notifications, deep linking, Stripe · PayPal · Paystack, KYC & biometric verification, Bluetooth LE, NFC, offline-first sync

Backend & Web Node.js, Java Spring Boot, React.js, Vite

Delivery Git, CI/CD pipelines, unit & instrumentation testing, code review, Play Store & App Store release management, Agile/Scrum, technical mentorship

PROFESSIONAL EXPERIENCE

Mobile SDK Engineer — Pose Detection & Computer Vision

ApataTech (contract) · Client: Blatchford Solutions, Basingstoke, UK · Remote · Oct 2025 – Present

SDK architecture

- Architected a unified .NET MAUI Android SDK abstracting two ML backends — Google MediaPipe and Google ML Kit — behind a single public API, allowing engine switching by configuration with zero consumer code changes.
- Built and maintained C# binding libraries (Xamarin/MAUI) wrapping native Android AAR packages for both ML engines, resolving dependency conflicts across parallel NuGet and Gradle chains.
- Designed a fluent Builder-pattern configuration API spanning 40+ feature flags — UI visibility, recording modes, overlay presets, camera options and branding — propagated through the full MAUI bindable-property layer to the underlying native Android views.

Computer vision & video pipeline

- Integrated real-time pose landmark detection with skeletal overlay rendering, joint-angle computation and configurable body-part highlighting.
- Implemented live face blur on camera preview using a dedicated SurfaceView with pre-allocated bitmap pooling, plus post-recording face redaction via Jetpack Media3 Transformer applied to the raw camera stream independently of the composited overlay.
- Built a dual-track recording system producing raw camera and composited overlay video simultaneously using MediaCodec and MediaMuxer with a HandlerThread-based encoder queue that keeps the UI thread unblocked.

Performance

- Removed redundancy in the overlay dispatch pipeline to eliminate visible rendering lag during live detection.
- Offloaded MediaCodec frame writes to a dedicated background thread, cutting UI-thread pressure during recording.
- Rate-limited face-blur preview updates with a volatile pending-frame flag to prevent frame-queue saturation at high camera frame rates.

Senior Mobile Application Developer

Caluu Ltd · London, UK · Remote · May 2025 – Feb 2026

- Led design and development of cross-platform SDKs and framework packages consumed by partner teams across Android, iOS, React Native and Flutter.
- Built an address-verification SDK delivered three ways from one specification — native iOS (Swift, MapKit), a React Native TurboModule and a Flutter plugin — giving partners identical behaviour regardless of stack.
- Engineered core SDK capabilities including foreground services, server-driven UI rendering and dynamic form submission, enabling partners to drop in configurable, theme-aware components.
- Integrated KYC and identity verification (QoreID) covering document capture and liveness/face verification flows.
- Built a multi-provider payments integration layer abstracting Stripe, PayPal and Pystack behind a single interface.
- Authored demo applications, integration guides and versioned release documentation, and ran hands-on onboarding and troubleshooting for integrating teams.

Senior Mobile Application Developer

Synergy Inc · Wyoming, USA · Remote · Feb 2025 – Jun 2025

- Delivered a Flutter recruitment platform (Synergy) to both Google Play and the App Store, owning release configuration, deep linking and environment management.
- Architected crowdfunding, real-time messaging and dynamic UI modules using BLoC and Cubit with clean separation of concerns.
- Integrated authentication, in-app purchases, chat and personalised recommendations over REST APIs and third-party services.
- Profiled and optimised runtime performance — resolving memory leaks and frame drops to keep animations and transitions smooth.
- Mentored junior and intern developers through code review and Flutter best-practice sessions.

Lead Mobile Application Developer

OnfleeQ Technologies Limited · Abuja, Nigeria · Jun 2024 – Feb 2025

- Led mobile development for onfleeQ Pro, an on-demand beauty marketplace shipped on iOS and Android in React Native.
- Wrote custom native modules to bridge platform capabilities not exposed by the React Native ecosystem.
- Integrated social login, payment gateways, real-time chat (Zoho SDKs) and a recommendation system.
- Implemented push notifications and in-app messaging to drive retention, and cut load times through render and bundle optimisation.
- Partnered with backend engineers on API contracts to keep data consistent across devices, and with designers to ship pixel-accurate interfaces.

Mobile Application Developer

Netapps Technologies Limited · Abuja, Nigeria · Oct 2023 – Jun 2024

- Built and maintained Netapps Marketplace, a fintech bill-payments and financial-services app live on both stores (React Native).
- Delivered hardware integrations including Bluetooth LE thermal printers, NFC debit-card reading and on-device face recognition.
- Improved performance and stability of existing production applications as part of a delivery team.
- Managed Git workflows and release branches, and reported progress directly to client stakeholders.

Founder & Mobile Developer

Devstrike Digital Limited · Abuja, Nigeria · Nov 2022 – Oct 2023

- Founded and ran a software consultancy delivering Android, iOS and Flutter applications for clients across fintech, e-commerce, logistics and health.
- Shipped client products including Partnerd (Flutter, BloC, Socket.io, Paystack), Tailors Log (Flutter ERP with subscription billing) and Gookway (Flutter e-commerce) — all published to Google Play and the App Store.
- Ran requirements gathering, architecture, delivery and post-launch support directly with founders and stakeholders.
- Expanded into native iOS (Swift/SwiftUI) alongside an existing Android practice.

Lead Android Developer

Namek Solutions Nigeria Ltd · Abuja, Nigeria · Aug 2021 – Oct 2022

- Led native Android delivery in Kotlin for healthcare clients, including a service-locator app surfacing nearby healthcare providers.
- Built the organisation-facing tablet application for the Cura DHIN project, enabling healthcare organisations to register on a blockchain network, manage staff and services, and operate tokens (MVVM, FHIR, SNOMED CT).
- Implemented offline storage, threading and performance tuning for reliable use on low-connectivity devices.
- Reported delivery progress and upcoming milestones weekly to executive stakeholders.

SELECTED SHIPPED PRODUCTS

- **Partnerd** — Africa-focused partnership platform connecting founders with investors and professionals. Flutter, BloC, Socket.io, Paystack. iOS + Android.
- **onfleekQ Pro** — On-demand beauty marketplace with real-time booking and in-app purchase. React Native, native modules, Zoho SDKs. iOS + Android.
- **Netapps Marketplace** — Fintech bill-payments app with Bluetooth LE printer and NFC card support. React Native. iOS + Android.
- **Synergy** — Recruitment platform connecting companies with vetted professionals. Flutter, BloC. iOS + Android.
- **Tailors Log** — ERP-style business management app for tailoring and fashion businesses, with subscription billing. Flutter. iOS + Android.
- **Gookway** — E-commerce platform with catalogue, checkout and order management. Flutter, Paystack. iOS + Android.

EDUCATION

BSc, Computer Science — Caritas University, Enugu, Nigeria · 2020
